

TRANSFORMANDO DOCUMENTOS XML EM XLSX

MINERAÇÃO DE DADOS

CST em Desenvolvimento de Software Multiplataforma

PROF. Me. TIAGO A. SILVA

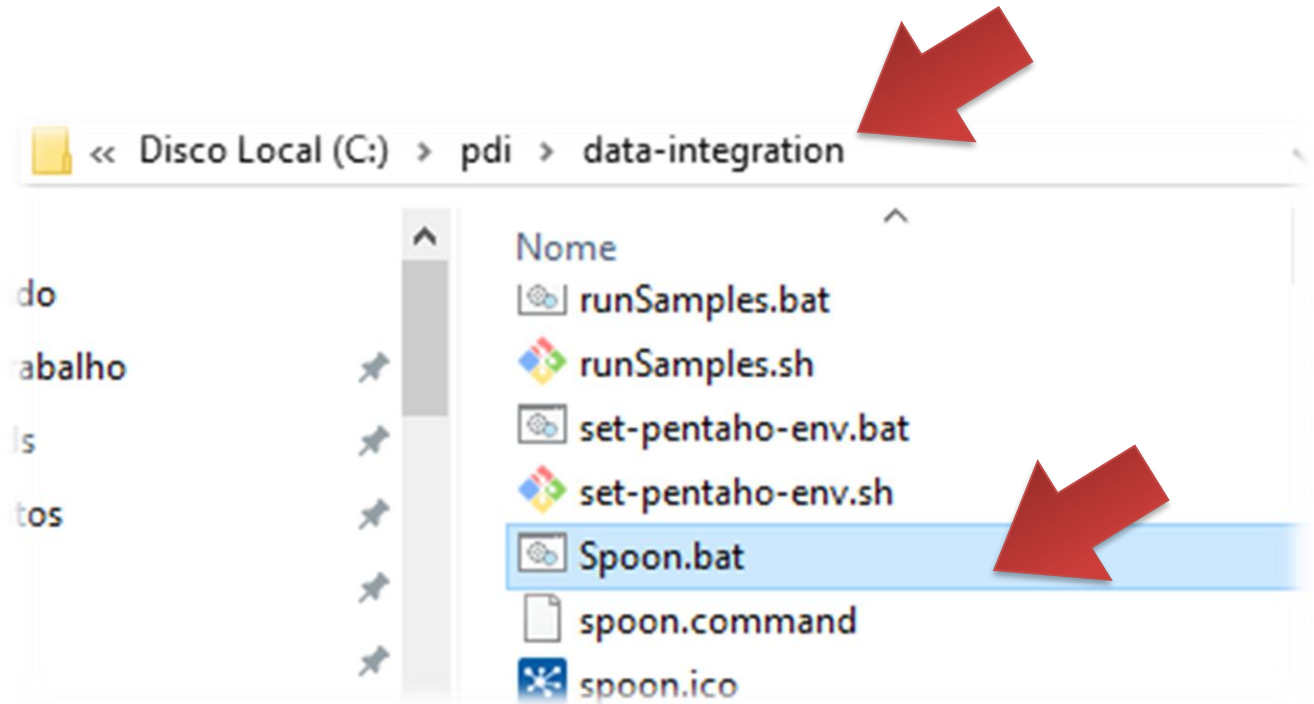

COMEÇANDO

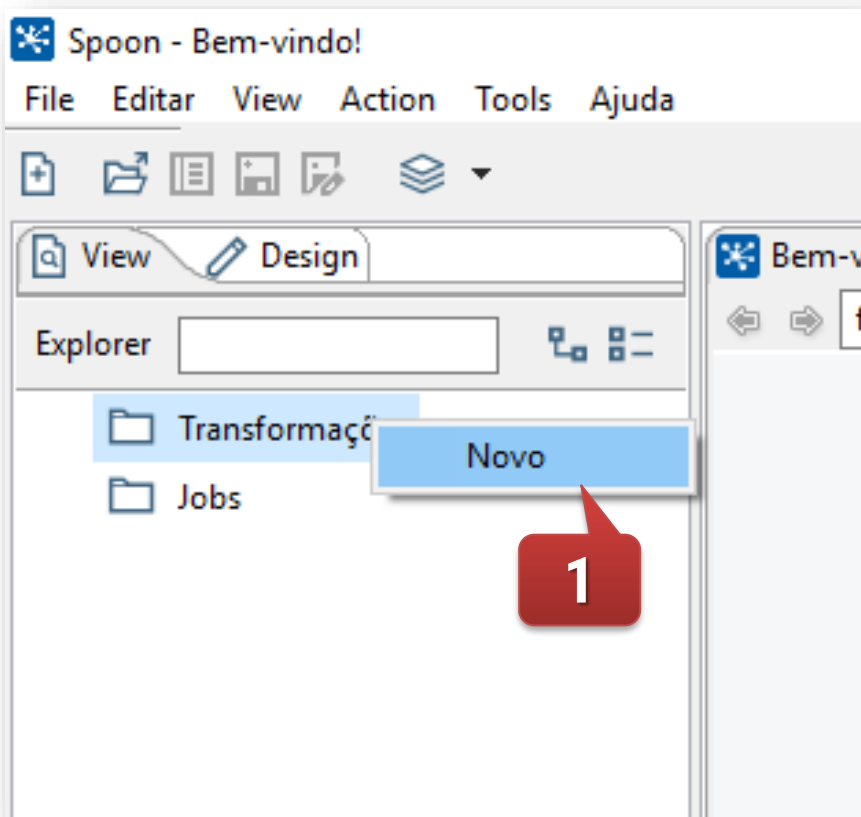

■ Executar o Spoon

■ Deu erro?

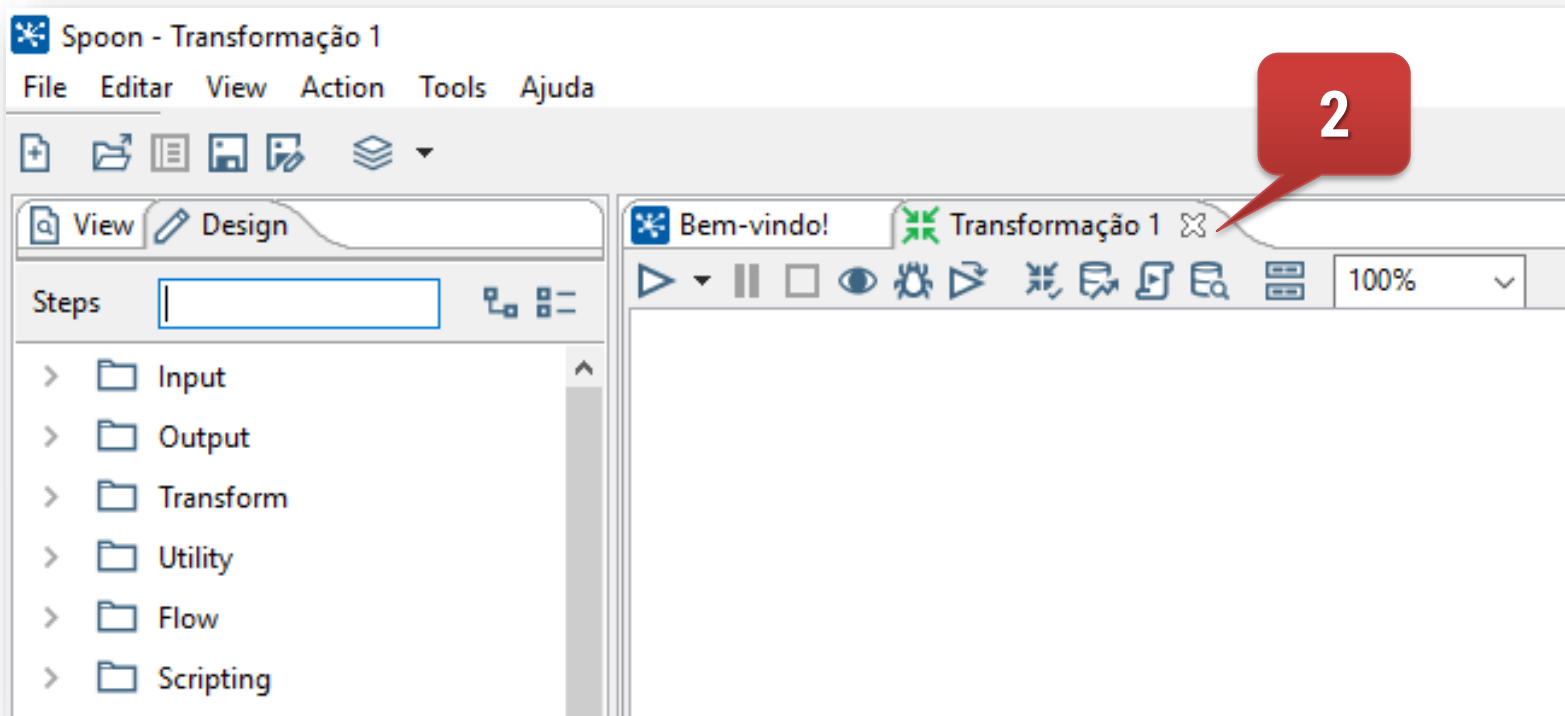

- Memória RAM é suficiente?
- Editar arquivo .bat ou .sh
- Alterar variáveis: **xms** e **xmx**
 - Reduzir o valor, tente 512.

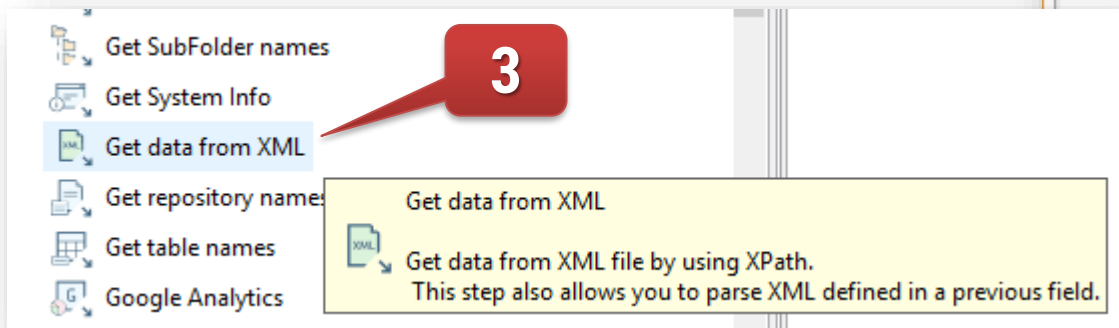

Windows: *.bat
Outros: *.sh

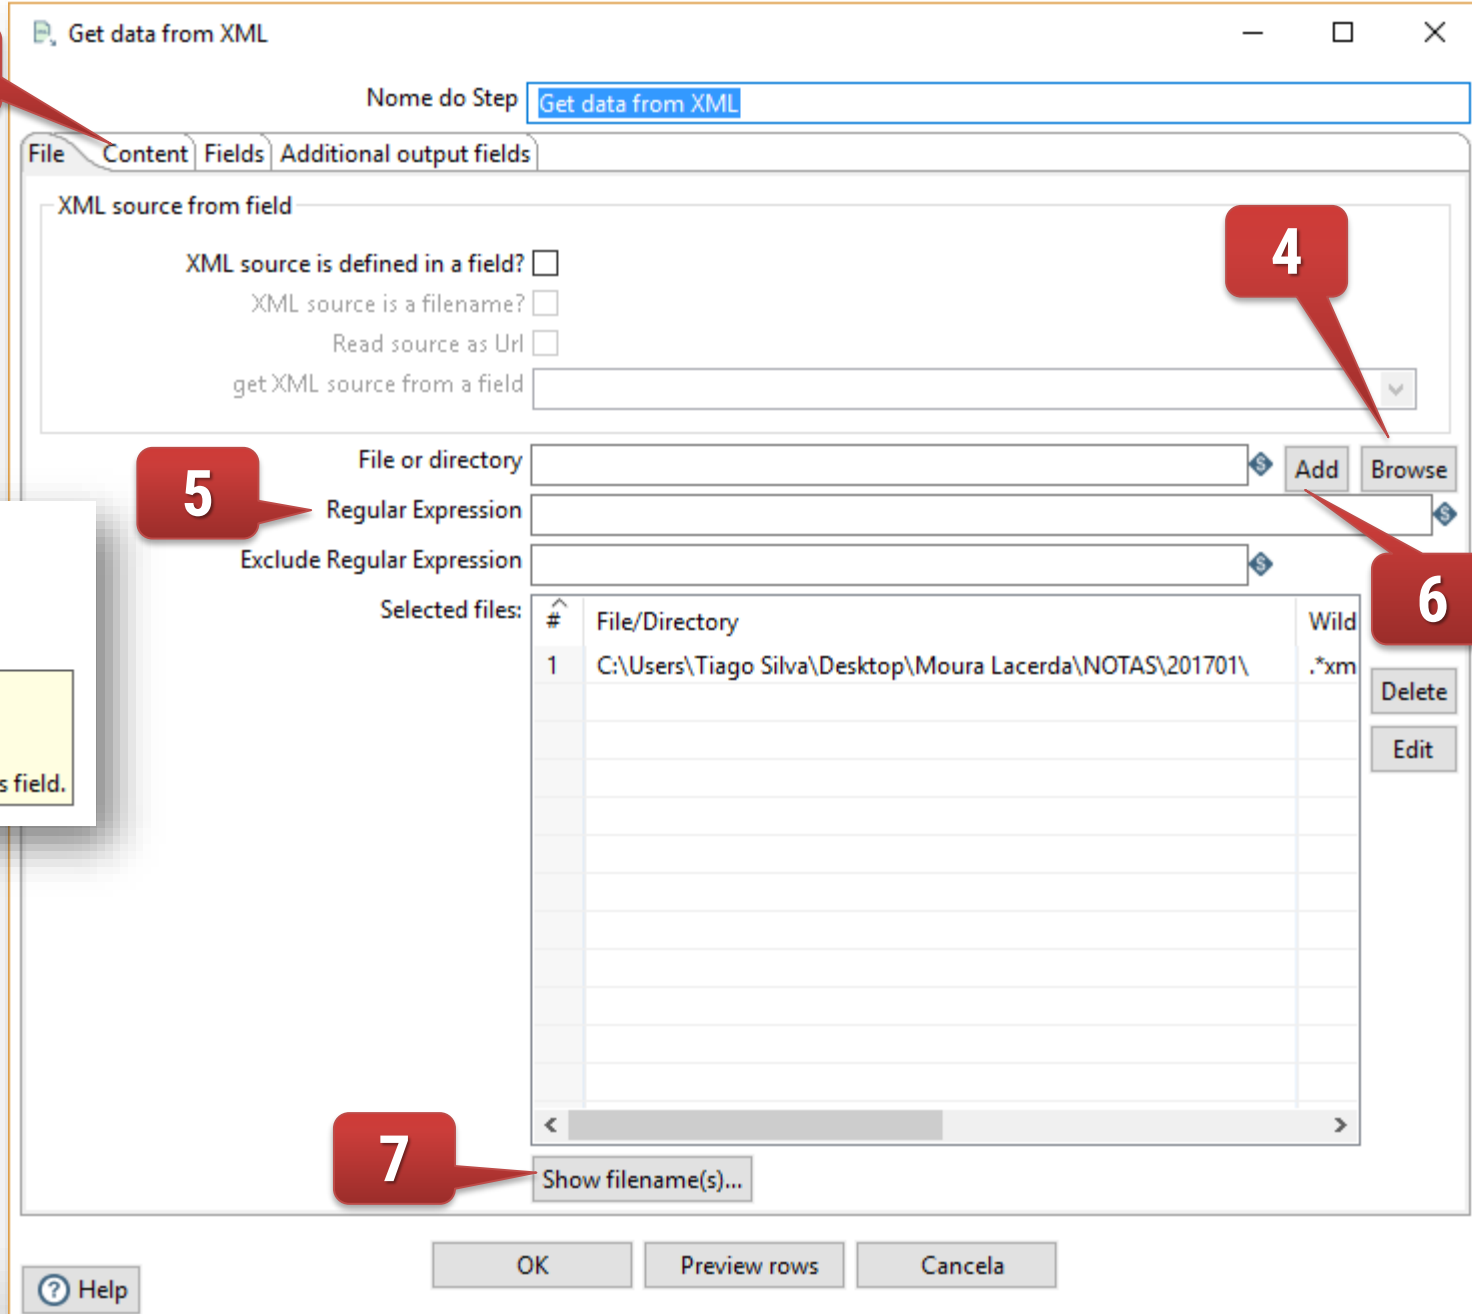

O começo de tudo: Transformações

Selecione a entrada
de dados: INPUT

Expressão regular para
obter todos os
arquivos XML de um
diretório: **.*xml**

Get data from XML

Nome do Step: Get data from XML

File Content Fields Additional output fields

Settings

Loop XPath:

Encoding:

Namespace aware? ☐

Ignore comments? ☐

Validate XML? ☐

Use token? ☐

Ignore empty file? ☐

Do not raise an error if no files? ☒

Limit:

Prune path to handle large files:

Additional fields

Include filename in output? ☐ Filename fieldname:

Rownum in output? ☐ Rownum fieldname:

Add to result filename

Add files to result filename? ☐

Selecionando a saída de dados

17

ATENÇÃO: Antes de realizar essa etapa verifique se os componentes estão ligados (hop) corretamente.

18

A screenshot of the 'Excel Writer Step' configuration dialog, specifically the 'File' tab. The dialog is titled 'Excel Writer Step v1.2 by type-exit.org'. The 'Nome do Step' field is set to 'Microsoft Excel Writer'. The 'File' section contains the following fields and options: 'Filename' (C:\arquivos-pdi\Clientes), 'Extensão' (xls [Excel 97 and above]), 'Stream XSLX data' (unchecked), 'Split every ... data rows' (0), 'Include stepnr in filename?' (unchecked), 'Include date in filename?' (unchecked), 'Include time in filename?' (unchecked), 'Specify Date time format' (unchecked), 'Date time format' (empty), 'Show filename(s)...' button, 'If output file exists' (replace with new output file), 'Wait for first row before creating file' (unchecked), and 'Add filenames to result' (checked). A red callout bubble with the number '18' points to the 'Filename' field.

19

A screenshot of the 'Excel Writer Step' configuration dialog, specifically the 'Sheet' tab. The 'Sheet' section contains the following fields and options: 'Sheet name (max. 31 characters)' (Lista Clientes), 'Make this the active sheet' (checked), 'If sheet exists in output file' (replace with new sheet), 'Protect sheet? (XLS format only)' (unchecked), 'Protected by user' (empty), and 'Password' (empty). A red callout bubble with the number '19' points to the 'Sheet name' field.

Execution Results

Execution History | Logging | Step Metrics | Performance Graph | Metrics | Preview data

#	Nome do step	Copia nr	Lidos	escritos	Entrada	Saída	Atualizados	Rejected	Erros	Ativo
1	Clientes	0	0	2571	2571	0	0	0	0	Finished
2	Microsoft Excel Writer	0	2571	2571	0	2572	0	0	0	Finished

CONSIDERAÇÕES FINAIS

- No ambiente do Pentaho Data Integration nós sempre vimos o esquema de entrada e **saída de dados**.
- É importante que você selecione o tipo adequado para cada tipo de campo, **na dúvida e para testar use apenas string**.
- DICA: veja a direção do hop quando for fazer a ligação, **sempre da entrada de dados para a saída**, exemplo XML -> Excel

OBRIGADO!
